Figure 1: Part 1 wireshark screenshot

2 Part - 2: A first look at the captured trace

1. What is the IP address and TCP port number used by the client computer (source) that is transferring the `alice.txt` file to `gaia.cs.umass.edu`? To answer this question, it's probably easiest to select an HTTP message and explore the details of the TCP packet used to carry this HTTP message, using the "details of the selected packet header window"

The source IP addr is 10.200.93.2 and port number is 60830.

No.	Time	Source	Destination	Protocol	Length	Info
9397	18:16:44.984408	10.200.93.2	128.119.245.12	HTTP	4919	POST /wireshark-labs/lab3-1-reply.htm HTTP/1.1 (text/plain)[...]

Figure 2: Q1. IP address

Transmission Control Protocol, Src Port: 60830, Dst Port: 80, Seq: 148164, Ack: 1, Len: 4865
[16 Reassembled TCP Segments (153028 bytes): #9349(707), #9350(11250), #9357(1250), #9360(2256)
Hypertext Transfer Protocol
POST /wireshark-labs/lab3-1-reply.htm HTTP/1.1\r\n

Figure 3: Q1. Port no

2. What is the IP address of `gaia.cs.umass.edu`? On what port number is it sending and receiving TCP segments for this connection?

The destination IP addr is 128.119.245.12 and receiving port number is 80.

3 Part - 3: TCP Basics

1. What is the sequence number of the TCP SYN segment that is used to initiate the TCP connection between the client computer and gaia.cs.umass.edu? What is it in this TCP segment that identifies the segment as a SYN segment?

The sequence number of the TCP SYN segment that is used to initiate the TCP connection between the client computer and gaia.cs.umass.edu is 0. The message contains a SYN flag indicates that it is a SYN segment. (screenshot attached)

Sequence Number: 0 (relative sequence number)

Figure 4: Q1. sequence number

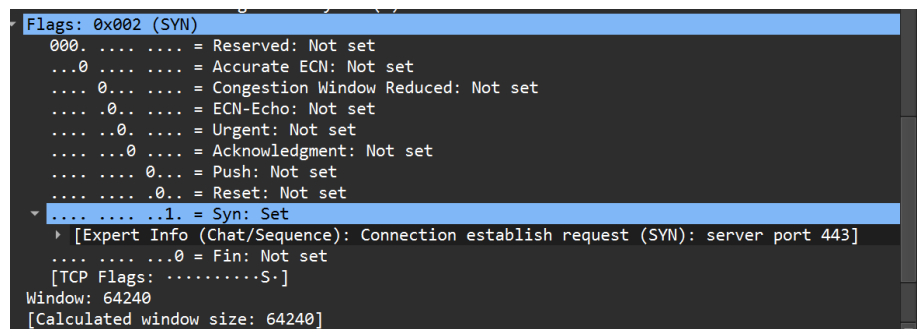

Figure 5: Q1. Flag SYN

2. What is the sequence number of the SYNACK segment sent by gaia.cs.umass.edu to the client computer in reply to the SYN? What is it in the segment that identifies the segment as a SYNACK segment? What is the value of the Acknowledge-

ment field in the SYNACK segment? How did gaia.cs.umass.edu determine that value?

The sequence number of the SYNACK segment sent by gaia.cs.umass.edu to the client computer in reply to the SYN is 0. The value of the acknowledgment field is 1 as shown in screenshot. Initial sequence number is +1 which determines it i.e. $ACK = SEQ + 1$. Flags shows it to be a SYN ACK message which is carried in message.

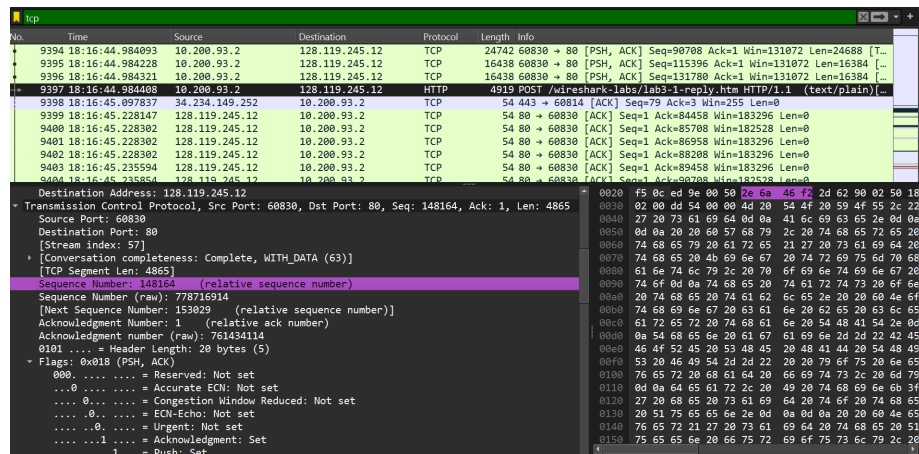

```
Source Port: 80
Destination Port: 60830
[Stream index: 57]
[Conversation completeness: Complete, WITH_DATA (63)]
[TCP Segment Len: 0]
Sequence Number: 0 (relative sequence number)
Sequence Number (raw): 761434113
[Next Sequence Number: 1 (relative sequence number)]
Acknowledgment Number: 1 (relative ack number)
Acknowledgment number (raw): 778568751
1000 .... = Header Length: 32 bytes (8)

.... ....0... = Push: Not set
.... .... .0.. = Reset: Not set
.... .... ..1. = Syn: Set
```

Figure 6: Q1. Flag SYN ACK

3. What is the sequence number of the TCP segment containing the header of the HTTP POST command? Note that in order to find the POST message header, you'll need to dig into the packet content field at the bottom of the Wireshark window, looking for a segment with the ASCII text "POST" within its DATA field. How many bytes

of data are contained in the payload (data) field of this TCP segment? Did all of the data in the transferred file `alice.txt` fit into this single segment?

Sequence Number: 148164 (relative sequence number) screenshot is attached. TCP payload (471 bytes). No, all of the data in the transferred file `alice.txt` does not fit into this single segment

4. Consider the TCP segment containing the HTTP “POST” as the first segment in the data transfer part of the TCP connection. (i) At what time was the first segment (the one containing the HTTP POST) in the data-transfer part of the TCP connection sent? (ii) At what time was the ACK for this first data-containing segment received? (iii) What is the RTT for this first data-containing segment? (iv) What is the RTT value of the second data-carrying TCP segment and its ACK?

- (i) time: 19:47:10
- (ii) time : 19: 47: 10
- (iii) RTT: 0.000128 seconds
- (iv) RTT: 0.3070 seconds

20201 19:47:10.315903 10.200.93.2 128.119.245.12 HTTP 4919 POST /wireshark-labs/lab3-1-reply.htm HTTP/1.1 (text/plain)

Figure 7:

[SEQ/ACK analysis]
 [This is an ACK to the segment in frame: 299]
 [The RTT to ACK the segment was: 0.000128000 seconds]
 [iRTT: 0.324742000 seconds]

Figure 8: Q4. (iii)

[SEQ/ACK analysis]
 [This is an ACK to the segment in frame: 298]
 [The RTT to ACK the segment was: 0.307014000 seconds]
 [iRTT: 0.257402000 seconds]

Figure 9: Q4. (iv)

5. What is the length (header plus payload) of each of the first four data-carrying TCP segments?

First four data-carrying TCP segments:

707+54 = 761 Bytes 11250 + 54=11304 Bytes 23750 + 54 = 23804 Bytes 47500 + 54 = 47554 Bytes

6. What is the minimum amount of available buffer space advertised to the client by gaia.cs.umass.edu among these first four data-carrying TCP segments? Does the lack of receiver buffer space ever throttle the sender for these first four data-carrying segments?

The receiver window, or buffer space, has a value of 65535. We do not approach this buffer size, so it does not throttle the sender.

```
[ [truncated]14 Reassembled TCP Segments (153028 bytes): #20171(707), #20172(11250), #2
```

- [Frame: 20171, payload: 0-706 (707 bytes)]
- [Frame: 20172, payload: 707-11956 (11250 bytes)]
- [Frame: 20178, payload: 11957-35706 (23750 bytes)]
- [Frame: 20186, payload: 35707-83206 (47500 bytes)]
- [Frame: 20198, payload: 83207-115394 (32188 bytes)]
 - > [Frame: 20241, payload: 109457-110706 (1250 bytes)]
 - > [Frame: 20244, payload: 109457-110706 (1250 bytes)]
- [Frame: 20242, payload: 111957-113206 (1250 bytes)]
- [Frame: 20246, payload: 111957-113206 (1250 bytes)]

- [Frame: 20199, payload: 115395-131778 (16384 bytes)]
- [Frame: 20200, payload: 131779-148162 (16384 bytes)]
- [Frame: 20201, payload: 148163-153027 (4865 bytes)]

[Segment count: 14]

Figure 10: Q5. length (header plus payload)

7. Are there any retransmitted segments in the trace file? What did you check for (in the trace) in order to answer this question?

Yes, I checked for `tcp.analysis.retransmission`

No.	Time	Source	Destination	Protocol	Length	Info
186	20:06:57.749896	10.200.247.226	142.250.192.78	TCP	1304	[TCP Retransmission] 51164 → 443 [PSH, ACK] Seq=32496 Ack=9845 Win=...
187	20:06:57.765466	10.200.247.226	142.250.70.110	TCP	1304	[TCP Retransmission] 51161 → 443 [PSH, ACK] Seq=43966 Ack=2415 Win=...
281	20:07:01.621038	142.250.192.78	10.200.247.226	TCP	93	[TCP Spurious Retransmission] 443 → 51164 [PSH, ACK] Seq=11827 Ack=...

Figure 11: 7. tcp.analysis.retransmission

8. How much data does the receiver typically acknowledge in an ACK among the first ten data-carrying segments sent from the client to `gaia.cs.umass.edu`? Can you identify cases where the receiver is ACK-ing every other received segment among these first ten data-carrying segments?

480 bits of data are normally acknowledged by the receiver. A receiver may occasionally ACK each and every other received segment. When there are two consecutive ACKs, this is evident.

9. What is the throughput (bytes transferred

per unit time) for the TCP connection? Explain how you calculated this value.

File Data: 152321 bytes

File Data / (0.4620033 - 0.413820) = 152321 / 0.01187
= 1282196.78 bytes per sec

4 Part - 4 TCP congestion control in action

1. Use the Time-Sequence-Graph (Stevens) plotting tool to view the sequence number versus time plot of segments being sent from the client to the gaia.cs.umass.edu server. Can you identify where TCP's slow start phase begins and ends, and where congestion avoidance takes over?

Observe the given diagram. Slow start time starts at 0.25 and ends at 0.56 seconds. And congestion time starts at 0.8 seconds.

Figure 12: Q4. Time-Sequence-Graph (Stevens)
